

ExtensionDevHost Refactor Plan (Updated Progress)

Overall Goal

Transform ExtensionDevHost from a collection of popup utilities into a cohesive workspace shell driven from the main TreeView and embedded content panel.

Completed Work

Navigation Refactor

Completed

- Added top-level navigation structure:
- Project
- Add-in Projects
- Templates
- Tools
- Docs

Removed

- AI node
- Project Space node
- Duplicate standalone utility nodes

Project Node

Completed

OpenAI API Key

- Converted from popup dialog into embedded workspace panel.
- Loads into `contentPanel`.
- Supports:
 - key editing
 - save
 - reload
 - local validation/testing

AI Add-in Designer

- Converted into embedded workspace panel.
- Loads on single click.
- Added:
 - add-in name
 - project type
 - summary
 - goals/requirements
 - AI workspace area

Project Space Creation

The AI Add-in Designer now:

- creates module folders
- creates Docs folder
- creates:
 - CatchUp.md
 - Addin_Design_Spec.md
 - Expensa_Integration_Design_Spec.md
- registers the project
- refreshes the main tree

Removed

- New Project Space node

Add-in Projects Node

Completed

Each registered project now contains:

Project

■■■ Catch-Up Doc

■■■ Design Spec

■■■ Expensa Integration Spec

■■■ Project Folder

■■■ Docs Folder

Docs Folder

- Enumerates markdown files
- Opens selected docs in DocsEditorForm

Folder Behavior

- Double-click still opens physical folders

Embedded Workspace Conversion

Completed

Tools → Manage Extensions

- Embedded into main content panel
- Added refresh event support

Tools → Command Catalog

- Embedded into main content panel

Tools → Query Catalog

- Embedded into main content panel

Query Catalog

Added:

- SqlQuery table inspection
- Ensure SqlQuery table support

Tree Behavior

Completed

Single Click Navigation

Added:

NavigationTreeView_NodeMouseClicked

Tree nodes now respond immediately even when already selected.

Double Click Behavior

Preserved for:

- opening folders
- external launch actions

Docs Editor Improvements

Completed

Markdown Rendering

- Markdown preview rendering working
- Source editor toggle working

Toolbar

- Standard toolbar behavior
- icon upgrades
- markdown formatting actions

AI Review

- prompts to save before review
- AI change highlighting
- persistent highlighting until save
- wait cursor during review

Layout Persistence

- splitter persistence
- main form size persistence
- main form position persistence

Upload / Packaging Improvements

Completed

Upload Packaging Script

PowerShell packaging script now:

- runs from solution root
- outputs to:
Extensions\Upload
- removes previous zip files
- skips:
 - bin
 - obj
- non-source output files

Remaining Work

AI Workflow

Planned

- real AI conversation integration
- streaming AI responses
- AI-generated design refinement
- scaffold regeneration workflows
- AI-generated integration specs

Docs System

Planned

- project-level editable coding rules
- AI-assisted doc rewriting
- document diff visualization improvements
- richer markdown support

Extension System

Planned

- extension deployment/update workflow
- backup support before deploy
- extension version management
- enable/disable workflow improvements

Future Workspace Goals

Planned

- dockable workspace panels
- tabbed document interface
- live AI side-panel
- integrated scaffold diff viewer
- solution-aware navigation
- integrated build/test output panels

Architectural Direction

The application is now transitioning from:

Popup utility launcher

to:

Persistent IDE-style workspace shell

The major architectural foundation is now in place:

- embedded workspace hosting
- centralized navigation
- project-aware tree structure
- integrated docs workflow
- AI-driven project scaffolding foundation
